

Proteinase 2011

From Molecules to Medicines
7th SCI-RSC Symposium on Protease Inhibitor Design

Monday and Tuesday 11th and 12th April 2011

Basel, hosted by Novartis

Synopsis

This symposium will focus on progress in the design and synthesis of aspartic, serine, cysteine and metalloprotease inhibitors for a diverse range of target indications, covering the whole spectrum of drug discovery activities: from 'Molecules to Medicines'.

Modern concepts in the early phases of drug discovery, like target validation and approaches towards inhibition of difficult protease targets, as well as the application of modern Drug Design concepts like FBDD will be presented. At the other end of the spectrum, the symposium will feature success stories of protease inhibitors in advanced clinical trials or having reached the market recently.
